

Summary

Wang Hong likes to walk around among flowers, trees and plants to make her mind clear.

She was interested in mathematics when she was five or six.

Her parents allowed her to do what she wanted like going to bookstores to read some math books and try to solve the problems.

Mathematics became difficult when she went to college.

She works in Fourier analysis and geometric measure theory.

Questions

1. What should we do if we choose to study what we're really interested in, we can't find good jobs?
2. How to balance our daily life and study?
3. If we love something but we think we are not good at it, whether should we still choose what we love or find other thing to study?

New words

- axiom 公理
- discipline 纪律; 训练方法
- reevaluate 重新考虑
